

DrivenX

Vehicle Rental & Lease-to-Own Management Software Scope of Work (SOW)

1. Project Objective

Develop a secure, web-based internal management system for DrivenX to manage long-term car rentals, lease-to-own arrangements, B2B vehicle sourcing, customers, suppliers, contracts, payments, insurance, documents, fleet operations, expenses and profitability.

Core business flow: Supplier → Vehicle → Customer → Contract → Payments → Expenses → Profit

2. User Roles

- Super Admin — full access.
- Admin/Management — customers, vehicles, suppliers, contracts, payments, reports and profitability.
- Sales Staff — leads, deals, customer information, documents and deal calculator.
- Accounts/Finance — payments, receivables, supplier payments, expenses and financial reports.
- Operations — vehicles, maintenance, insurance, registration, accidents, fines and handover/return.
- Role-based permissions must be configurable by the Super Admin.

3. Dashboard

- KPIs: total vehicles, company-owned vehicles, B2B vehicles, available/rented vehicles, active customers, active contracts, monthly revenue, monthly vehicle cost, monthly profit, customer outstanding, supplier payables, insurance renewals and expiring documents.
- Alerts for overdue payments, expiring Emirates IDs/driving licenses, vehicle registration, insurance, contracts and maintenance.
- Filters by date, vehicle, supplier, customer, salesperson and contract type.

4. Vehicle / Fleet Management

- Vehicle ID, make, model, year, variant, color, plate number, VIN/chassis number, mileage, status, ownership type, supplier, source date, documents and photos.
- Ownership: Company Owned or B2B/Supplier Vehicle.
- Status: Available, Reserved, Rented, Lease-to-Own, Maintenance, Accident, Returned, Sold, Inactive.
- Financial data: supplier monthly cost, customer monthly price, deposit, insurance, other expenses, monthly revenue, monthly cost, monthly profit, total contract revenue and expected profit.

5. Supplier / B2B Partner Management

- Company name, contact person, phone, email, address, trade license, TRN/VAT, bank details, agreements, documents and notes.
- Supplier vehicle list with active vehicle count, monthly cost, customer revenue and expected profit.
- Supplier payment tracking: due amount, due date, paid amount, outstanding and payment history.

6. Customer Management & Documents

- Customer profile: Customer ID, full name, mobile, email, DOB, nationality, address and emergency contact.
- Documents: Emirates ID, Driving License, Passport, Visa and other documents.

- Each document stores document number, issue date, expiry date, uploaded file, status and reminder settings.
- Secure document storage with expiry alerts at configurable intervals such as 60, 30, 15 and 7 days.

7. Lead & Sales CRM

- Lead information: name, phone, email, source, interested vehicle, budget, contract duration, salesperson and notes.
- Lead statuses: New → Contacted → Qualified → Deal Created → Contracted → Lost.

8. Deal Calculator

- Inputs: vehicle, supplier, supplier monthly cost, customer monthly rental, contract duration, deposit, insurance, expected maintenance and other costs.
- Automatic calculation of monthly revenue, monthly vehicle cost, monthly gross profit, total contract revenue, total cost, expected total profit and profit margin.
- Example: supplier cost AED 2,400/month, customer price AED 3,500/month, 36 months → monthly gross profit AED 1,100 and expected gross profit AED 39,600 before other costs.

9. Contract Management

- Contract number, customer, vehicle, supplier, contract type, start/end date, duration, monthly rental, security deposit, insurance, mileage allowance, excess mileage charges, payment date, terms and contract document.
- Contract types: Long-Term Rental, Lease-to-Own, B2B Rental and Other.
- Statuses: Draft, Pending, Active, Overdue, Completed and Cancelled.

10. Payment Management

- Automatic payment schedule based on contract duration.
- Each installment: customer, contract, invoice number, due date, amount, paid amount, balance, payment date, payment method, reference and status.
- Statuses: Upcoming, Due, Partially Paid, Paid, Overdue and Waived.

11. Annual Customer Insurance

- Insurance must be treated as a separate recurring customer charge.
- Store customer, vehicle, provider, policy number, insurance type, insurance amount, start date, expiry date, policy document, payment status, amount paid and outstanding.
- Renewal alerts at 30, 15 and 7 days before expiry.
- Insurance revenue should be reported separately from monthly rental revenue and included in profitability calculations.

12. Vehicle Handover & Return

- Handover: customer, vehicle, date/time, mileage, fuel level, condition, existing damage, photos and customer/staff signatures.
- Return: return date, mileage, fuel, condition, new damage, photos, fines, outstanding payments, maintenance and final settlement.
- Generate PDF handover and return reports.

13. Maintenance, Fines & Accidents

- Maintenance: service date, mileage, garage/vendor, service type, description, cost, invoice and next service date/mileage.
- Fines: vehicle, customer, fine number, date, amount, authority, payer, status and documents.

- Accidents: vehicle, customer, date, location, description, photos, police report, insurance claim, repair cost, responsibility and status.
- Maintenance and repair expenses must feed into vehicle profitability.

14. Profit & Financial Reporting

- For each vehicle/contract show revenue: rental, insurance and other income.
- Show costs: supplier cost, maintenance, insurance cost, repairs and other expenses.
- Calculate Gross Profit and Net Profit.
- Reports by vehicle, customer, supplier, contract, month and year.
- Customer statement and supplier statement with paid, outstanding and historical transactions.

15. Reports & Exports

- Fleet reports, financial reports, customer reports, document expiry reports, overdue payment reports and vehicle profitability reports.
- Export reports to Excel and PDF.

16. Notifications & Search

- Notifications for payment due/overdue, insurance expiry, Emirates ID expiry, driving license expiry, registration expiry, contract expiry, maintenance and supplier payment due.
- Global search by customer name, mobile, Emirates ID, driving license, plate number, VIN/chassis, contract number, supplier and invoice number.

17. Admin, Security & Audit

- User management, roles, permissions, vehicle/contract/payment/expense/document categories, notification settings and company settings.
- Audit log showing who changed what and when.
- Secure authentication, role-based access, encrypted/secure document storage, automated backups and scalable architecture.

18. Future Integrations

- Architecture should be API-ready for WhatsApp Business API, payment gateways, accounting software, UAE vehicle/RTA-related services where APIs are available, SMS/email, e-signature and GPS/vehicle tracking.

19. Development Phases

- **Phase 1 — Core:** login/roles, dashboard, customers, documents, vehicles, suppliers, deal calculator, contracts, payment schedules, annual insurance, basic profit calculation and reports.
- **Phase 2 — Operations:** maintenance, accidents, fines, handover/return, advanced expenses, advanced reporting and PDF generation.
- **Phase 3 — Automation:** WhatsApp, payment gateway, e-signature, automated reminders, accounting integration and external APIs.

20. Ownership & Handover Requirements

- DrivenX must receive full ownership/control of source code, database, hosting/server, domain, API keys and Git repository.
- Developer must provide database documentation, deployment instructions, administrator credentials and technical documentation at project handover.

- Software must not depend on the developer's personal hosting, accounts or credentials.

Key Financial Logic

Item	Example
Supplier monthly cost	AED 2,300
Customer monthly rental	AED 3,400
Annual customer insurance	AED 2,500
Monthly rental gross profit	AED 1,100
Annual rental revenue	AED 40,800
First-year customer revenue incl. insurance	AED 43,300

Developer note: The database architecture and financial calculation engine are critical. The system should be designed so DrivenX can later support normal rental, long-term rental, lease-to-own, B2B fleet management and vehicle brokerage without rebuilding the core system.
